

March 27, 2023

To: Department of Energy

Subject: Energy Conservation Program: Energy Conservation Standards for General Service Lamps, 88 Fed. Reg. 1638 (EERE-2016-BT-STD-0022) (proposed Jan. 11, 2023)

The Institute for Policy Integrity at New York University School of Law¹ respectfully submits the following comments on the Department of Energy’s application of the social cost of greenhouse gases in its notice of proposed rulemaking for general service lamps (“Proposed Rule”),² and in the associated technical support document (“TSD”).³

Even though the Proposed Rule’s costs would exceed its benefits without considering climate effects,⁴ DOE appropriately applies the social cost estimates developed by the Interagency Working Group on the Social Cost of Greenhouse Gases (“Working Group”) to its analysis of climate benefits. The Working Group developed these estimates through a rigorous and transparent process incorporating the best available science available at the time.⁵ These values are widely agreed to underestimate the full social costs of greenhouse gas emissions.⁶ For now, however, they remain appropriate to use as conservative estimates—they have been applied in dozens of previous rulemakings⁷ and upheld in federal court.⁸

In November, the Environmental Protection Agency released a draft update to the social cost of greenhouse gases that faithfully implements the roadmap laid out in 2017 by the National Academies of Sciences and applies recent advances in the science and economics on the costs of climate change (“Draft Update”).⁹ These updated valuations further confirm that the Working Group’s climate-damage values represent conservative underestimates. **DOE should consider applying sensitivity analysis using EPA’s draft climate-damage estimates.**

¹ No part of this document purports to represent the views, if any, of New York University School of Law.

DOE Appropriately Applies the Working Group's Climate-Damage Estimates

DOE provides compelling justifications for readopting the Working Group's estimates¹⁰ that it briefly abandoned under the Trump administration. As detailed in the attached June 2022 comments on DOE's recent proposed standards for room air conditioners, which we incorporate by reference, there are numerous legal, economic, and policy justifications that further bolster DOE's adoption of the Working Group's climate-damage valuations.¹¹

The attached comments make four main points. First, they offer more detailed support for adopting a global framework for valuing climate impacts. These include legal justifications based on the Energy Policy and Conservation Act, the National Environmental Policy Act's broad government-wide policy mandates, the Administrative Procedure Act's requirement to consider all important factors, executive orders, and international agreements.¹²

Second, the comments offer additional justification for adopting the range of discount rates endorsed by the Working Group and for its decision not to apply a 7% capital-based discount rate to climate impacts. Besides climate effects presenting special legal, economic, and policy considerations for the discount rate, it is appropriate generally for DOE to focus its analysis of this rule on consumption-based rates given that most costs and benefits are projected to fall to consumption rather than to capital investments.¹³

Third, the comments offer further justification for relying on the Working Group's other methodological choices, including the fact that the Working Group applied a transparent and rigorous process that relied upon the best-available and most widely cited models for monetizing climate damages. The attached comments provide detailed rebuttals to criticisms of the Working Group's methodology from opponents of energy, consumer-rights, and climate regulation.¹⁴

Lastly, the attached comments suggest that DOE clearly state that any criticisms of the social cost of greenhouse gases are moot in this rulemaking because the Proposed Rule is cost-justified without any climate benefits.¹⁵

Accordingly, for the reasons set out in the attached comment letter, it is appropriate for DOE to continue to rely on the Working Group's valuations of the social cost of greenhouse gases as conservative estimates when it finalizes the Proposed Rule.

DOE Should Conduct Further Analysis Using EPA's Draft Updated Estimates

While DOE's application of the Working Group's valuations is legally justified, the agency should consider conducting additional sensitivity analysis using draft climate-damage valuations that EPA recently published.¹⁶ EPA's draft valuations faithfully implement the

roadmap laid out in 2017 by the National Academies of Sciences for updating the social cost of greenhouse gases¹⁷ and apply recent advances in the science and economics on the costs of climate change. EPA’s methodology and valuations are consistent with those applied by a range of expert independent researchers, and while EPA’s draft valuations remain underestimates,¹⁸ they more fully account for the costs of climate change by incorporating the latest available research on climate science, damages, and discount rates.

Sincerely,

Peter Howard, Economics Director
Max Sarinsky, Senior Attorney
